* must be machine-polished | ** for coloured products

Cleaning and care of natural oiled parquet

The oil treatment of parquet floors produces an impregnated surface that protects the parquet wood from wear and dirt. Regular cleaning and care of this surface will protect this surface and maintain its natural appearance.

Maintenance cleaning

A brush, mop or vacuum cleaner is sufficient for basic cleaning and removing loose dirt. Sticky dirt can be wiped off with a damp cleaning cloth. For damp wiping, add a non-abrasive cleaning product to the water, such as Bauwerk parquet cleaner*.

Heavy dirt can best be removed with Bauwerk Intensive Cleaner* or Bauwerk Spot Remover*.

Basic cleaning

Use Bauwerk Intensive Cleaner* to remove old layers left by care products.

Initial maintenance

On request, your installer will carry out the initial maintenance care after installation. This process will provide additional protection for the joints and edge areas to stop the penetration of dirt and moisture. We recommend that you use the Bauwerk Care Oil Eco colourless* for the initial maintenance.

Maintenance care

Bauwerk Mop Care* is recommended for routine maintenance care. This maintenance concentrate is added to the cleaning water. Treatment frequency depends on the intensity of use.

Touching up the surface

The cleaned surface can be rejuvenated with Bauwerk Care Oil Eco Colourless*. How often you have to oil your parquet depends on its use. We recommend re-oiling your floor once a year.

* Please read the instructions for use on the bottle.

Safety information

Cloths soaked with oil are flammable. Left standing in an exposed pile, the natural characteristics of dried vegetable oils can cause them to burst into flames. Therefore, you should store oil-soaked cloths in a closed metal container or dry them spread out on a non-flammable surface outside. After they are completely dry, the cloths can be disposed of with your normal household garbage.

Cleaning and care of lacquered parquet

Multiple layers of lacquer seal the surface and protect the parquet against use and dirt. Bauwerk offers three sealed lacquered surfaces: B-Protect, matt lacquered and lacquered. Bauwerk cleaning products remove any dirt while Bauwerk care products renew the protection provided by the lacquer sealing.

Maintenance cleaning

A brush, mop or vacuum cleaner is sufficient for basic cleaning and removing loose dirt. Sticky dirt can be wiped off with a damp cleaning cloth. For damp wiping, add a non-abrasive cleaning product to the water, such as Bauwerk Parquet Cleaner*.

Heavy dirt can best be removed with Bauwerk Intensive Cleaner* or Bauwerk Spot Remover*.

Basic cleaning

Use Bauwerk Intensive Cleaner* to remove old layers left by care products.

Initial maintenance

On request, your installer will carry out the initial maintenance care after installation. This process will provide additional protection for the joints and edge areas to stop the penetration of dirt and moisture. We recommend that you use the Bauwerk Wax Polish* or the Bauwerk Parquet Care Eco* for the initial maintenance. **Note:** For B-Protect surfaces, always use Bauwerk Parquet Care Eco*.

Maintenance care

We recommend Bauwerk Parquet Care Eco* for regular maintenance care. The treatment frequency depends on the intensity of use.

Touching up the surface

For touching up surfaces that are subject to substantial wear and tear, we recommend Bauwerk Wax Polish*. Since the treatment is done by machine, we recommend contacting your installer.

** Please read the instructions for use on the bottle.*

Repairing scratches and abrasion

Open patches can be protected by touching up the surface. For largescale damage or unusual spots, contact your installer.

Note: If you have nature oiled stained parquet, please contact your installer or one of our Worlds of Parquet to find the right Bauwerk care oil for your floor.

General information for your parquet floor

- › An effective dust matt or grating at the entrance can help prevent sand and dirt getting on your parquet floor.
- › Place soft felt sliders on the legs of your furniture, chairs, and tables to prevent scratches and gouging.
- › For areas of heavy use, such as through office chair rollers, it is recommended that you use a standard protective matt out of transparent plastic.
- › Use soft chair rollers and clean these regularly.
- › Maintaining a healthful room climate is vital for the value retention of our parquet floor and the wellbeing of those who use it. Especially in winter, we recommend that you make sure that there is sufficient humidity (for example, through a humidifier).
- › For those types of wood, which expand and contract considerably (such as beech), larger gaps can appear in winter. By humidifying the air and maintaining a healthful room climate (20 to 22 °C and during heating period 35 to 45% humidity), you can reduce the amount of this contraction.
- › When the underfloor heating is on, the surface temperature should never exceed 29 °C

The instruction information in this brochure is based on our many years of experience. Our guarantee is basically limited to the quality of our products. We cannot assume any liability for the incorrect or unprofessional application.

Note:

- › Never use all-purpose cleaners containing ammonia.
 - › Do not flood the floor with water. This can cause damage through swelling. We also recommend that you do not use a steam cleaner.
 - › Remove water or other fluids from the floor as soon as possible.
 - › Only use microfibre or cotton cloths recommended by Bauwerk.
-
